Division : _____

Topic/ Sub-Topic : Introduction & meaning co-operative orgn.

Date : 12/12/19

The word 'co-operation' is derived from the latin word 'co-operative.' meaning "to work with." the beliefs of co-operation aim to empower socially & economically weak individuals by enabling them to come together & form a group towards common socio-economic interest.

• Hubert Calvert says, "co-operative is a form of orgn wherein persons voluntarily associate together, as human beings on the basis of equality, for the promotion of the economic interests of themselves."

• Dr. H.N. Kunezh ; "co-operative is self-help as well as mutual help. It is a joint enterprise of those who are not financially strong & can't stand on their legs & therefore come together not with a view to get profits.

Sir Horace plckett, "co-operation is self-help made effective by orgn."

Title of the paper physical chemistry

Class : B.Sc sem-I

Division : _____

Topic / Sub-Topic : General Introduction Regarding syllabus
Date : 5/07/18 and Sub. (Thermodynamics)

Introduction :-

The word 'Thermodynamics' implies flow of heat. The subject however, is much more comprehensive. It deals with energy changes accompanying all types of physical & chemical process.

What is physical chemistry :-

The branch of chemistry concerned with the application of the techniques & theories of physics to the study of chemical systems.

Physical chemistry used in Daily Life

:- Physical chemistry is a branch of chemistry that studies the physical & material properties of chemical system or chemical process. The focus of physical chemistry generally revolves around the energy & thermodynamic properties of a system.

The most important sub-branches of physical chemistry are chemical kinetics, chemical spectroscopy, electrochemistry & thermochemistry.

Pure Physical Chemistry divided into four Areas
Thermodynamics, quantum Chemistry, statistical

Thermodynamics, This is a microscopic science
that studies the relationship between various
equilibrium properties of the system & changes in
the nature of equilibrium in the process.

Some Basic Term used in Thermodynamics

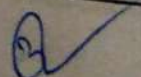

:- A few terms used in it are
discussed below.

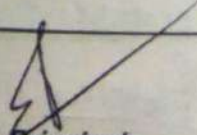

System :-

A system may be defined as
any specified portion of matter under study
which is separated from the rest of the
universe with a bounding surface. A system
may consist of one or more substance.

Surrounding :- The rest of universe which
might be in a position to exchange energy
and matter with the system is called the
Surrounding.

Introduction :-

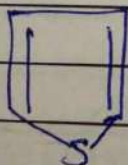

Heterocyclic compounds are those cyclic compounds whose ring contains besides carbon, one or more atoms of other elements. The non carbon atom in such ring are referred to as hetero atoms.

The most common hetero atoms are Nitrogen and oxygen, sulphur. heterocyclic compound containing are classified as follows.

organometallic compounds are enormously versatile reagents & defined as those compounds in which metal is directly linked with the carbon of the organic group.

for exa - $R-Li$, R_2-Zn , $R-MgX$ etc in this chapter we will discuss three organometallic compounds namely grignard reagent, allyl lithium & dialkyl zinc.

Grignard Reagent :-

An organometallic compound with general formula $R-Mg-X$ is commonly known as Grignard reagent. It is extremely important compound due to its synthetic utility.

Preparation :-

Grignard reagent is prepared in specially designed flask to avoid contact with water. Pieces of magnesium are suspended in ether in the flask & solution of alkyl halide is added dropwise in small instalments. A vigorous reaction takes place with the formation of G.R. the resulting solution is known as G.R. Victor Grignard who received the Nobel Prize in 1912 for its discovery.

Topic / Sub-Topic : structure

Date : 4/09/18

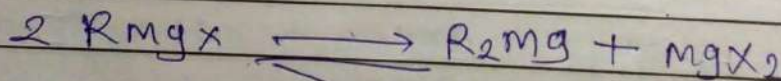

Structure :-

It is believed that the carbon - magnesium bond in grignard reagent is covalent bond strongly polar. the magnesium - halogen bond is essentially ionic

R - may be alkyl or aryl group.

It has also been suggested that Gr. R. exist in solution in equilibrium, as shown below.

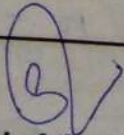

many attempt were made to isolate these compounds. they have been shown to contain ether of organic crystallization

different structures have been proposed for them in which they exist as monomers or dimers along with ether of crystallization

In dilute & concentrated ether soln it forms monomeric & dimeric forms.

Chemical Reaction

- 1) Substitution Reaction
- 2) Addition —||—

1) Substitution Reactions :- upon reaction with active hydrogen or halogen containing compounds, the MgX group of Gr. gets replaced by other atom or group.

Various examples are reactions 1, 2, 3, 4, 7, 14 & 15 described in the

2) Addition Reaction :-
 compounds containing carbon-oxygen double bond or carbon-nitrogen triple bond etc. react with Gr. R. by nucleophilic addition mechanism to afford an adduct which upon hydrolysis gives the desired product.

Formation of Alkane :-

By reaction with compounds containing active hydrogen atom

By measuring the volume of alkane obtained, the No of active hydrogen atoms present in Y-H can be calculated. This is known as Zerewitinoff method for determination of active hydrogen.

→ By reaction of alkyl halides :- higher alkanes are formed.

Nucleophilic Substitution Reaction In Nitrobenzene

In Nitrobenzene, the nitro group is electron withdrawing in nature. It decreases electron density on benzene ring & so deactivates the ring. Hence it gives Nucleophilic substitution reaction

PICRIC ACID (2,4,6-Trinitrophenol)

Preparation

1) From phenol by nitration :-

Phenol on treatment with conc. HNO_3 gives 2,4,6-trinitrophenol but the yield is poor due to large loss by oxidation.

by sulphonation of

phenol is first sulphonated to o- & p-hydroxyl sulphonic acid & the mixture then nitrated with conc. HNO_3 to obtain better yield
